Acudor City Cellar Doors

Are you looking for new city cellar doors? Whether it is your first time buying one or simply looking for a replacement, trust that Acudor can provide the perfect door for you.

They provide access to areas such as cellars and basements in buildings. They are an important part of maintaining property yet are commonly disregarded. Our aluminum city cellar doors are simple yet durable.

What are the advantages of using our city cellar doors? Here is a short breakdown:

- There is no rusting or leaking
- The door is lightweight and durable
- The product is sleek/attractive
- Safety hazards are avoided
- Rodent entry is avoided

What kind of city cellar doors do we offer? Our aluminum cellar door lineup includes the following models: FA-300, FC-300, and our FA-300-R. The FA-300 is a simple angle frame floor door with 300 lb/sq. ft. loading. It is designed for exterior and interior applications where watertightness is not a requirement.

It comes in 11 standard sizes, but custom sizes can also be made just for you. Meanwhile, our FC-300 is a channel-frame floor door. It is designed for outdoor and indoor applications where dirt and water are prevented from falling into a specific area. Drainage is provided through threaded coupling in channel. Finally, our FA-300-Retrofit is an angle-frame floor door that is not designed to be cast into concrete but rather bolted down into an existing opening.

Do not let your cellar doors be a trip hazard for those walking on the sidewalk. Acudor specializes in aluminum, flat cellar doors. Whether you are in large cities like New York City, Las Vegas, Los Angeles, and Miami or in a small town like Roseland (where our headquarters is located), trust us to provide the right cellar door for you.

Simply contact Acudor today! We got you covered.
