ACUDOR

SIDEWALK CELLAR DOORS

Acudor City Sidewalk Cellar Doors

Trust that Acudor can provide the secure and durable sidewalk cellar doors that you need. You may have already seen one of our sleek Sidewalk Cellar Doors outside of a commercial building.

If it is your first time purchasing a door with Acudor, rest assured that we can guide you to the perfect one. No project is too big or too small for us.

What is the purpose of sidewalk cellar doors? They are doors that are installed on the sidewalk and are often used to provide access to underground areas such as a cellar/basement. These are a great option you need to move merchandise without blocking the main entrance of a storefront. However, if you are in a densely populated area where there is a lot of foot traffic such as New York City, you may be worried about the door not being safe or durable. Rest assured that our doors are designed to avoid safety hazards while still giving you easy access.

Our aluminum sidewalk doors are lightweight and sleek without compromising strong support. No one wants to walk over rusted and outdated steel sidewalk doors. If you need a channel frame floor door with a drain, then our FC-300 would best fit your application. If you need a retrofit door, then we would recommend our FA-300-R. Acudor also manufactures other floor doors including H20 loading, fire-rated, and flood tight, just to name a few.

Do you need a custom door for your project or small business? Reach out to one of our representatives who can help you get started. With over 30 years of experience, Acudor is dedicated to finding the perfect solution. We offer high quality products that are made to last. For a complete guide to our floor doors, you can read more about them here.
