Acudor Fire Rated Access Doors

Fire Rated Acudor Access Doors are high quality and compliant with fire codes. We offer a variety of access door options, all designed for different applications.

If you need a door for walls or ceilings, specifically designed for drywall walls or ceilings, or even tile, you can count on us to have the ideal product for you. Let us walk you through some of our most popular fire rated doors.

The Acudor FB-5060 is an uninsulated, fire-rated, metal access door for walls. It is specifically designed to maintain continuity in a 2-hour fire rated wall when temperature rise is not a factor. It features an inside latch release, is self-closing and self-latching. It meets testing standards UL – B label, and ULC – B label (optional). If you need this type of door for drywall walls, then you should consider the FB-5060-DW, which has a drywall taping bead flange, designed for easy installation.

Meanwhile, the Acudor FW-5050 is a fire-rated, insulated, metal access door for walls and ceilings. When temperature rise or heat transmission is a factor in your project, turn to our FW-5050. This door also features an inside latch release. The 20-gauge door panel is filled with 2" thick fire rated insulation. We also offer the FW-5050-DW with a drywall bead for drywall walls and ceilings.

For enhanced protection against fire hazards, count on our fire rated access doors for the job. Speak with one of our experts today about acquiring one of the fire rated Acudor access doors for your upcoming construction project. Please note that with certain customizations, the door might not meet standard requirements due to not being tested as such.
